

Side-by-Side Milking Parlour - with “Fast Exit”

Side-by-Side - in brief:

- Cows are standing side-by-side and are milked from behind.
- Operator works in forward position thus avoiding twisting the body.
- Good ergonomical working position ensuring a comfortable milking.
- Short distance between the cows, approx. 70 cm. Spares the operator many steps.
- FAST EXIT - all cows leave at the same time. Ensures a fast change of cows and thus a high capacity.

Opening and closing of entrance doors are controlled by compressed air - from the pit. When the cows enter the milking parlour the separating iron elbows ensure a fast and correct placing of the cows.

After milking, the front doors open and the cows leave the milking parlour quickly, all at the same time - fast exit function. Milking parlour can be supplied with splash plates and manure gutter made of stainless steel. All equipment made of very strong hot galvanized material.
